SmartTripAI — Your trip, your way

Discover destinations, explore itineraries and plan around your needs.

Choosing places is easy. Making them fit is harder.

Three pain point hypotheses from project analysis, pending user validation.

01

Scattered information

Places, opening hours, routes and costs come from different sources.

→ Constraints are easy to miss.

02

Hard to fit everything

Balance interests, time and budget.

→ Overpacked days or unnecessary detours.

03

Changes take effort

Changing one stop means checking the rest again.

→ More time spent revising.

Our focus: help travelers build and check a plan that fits their needs.

The bottleneck: turning places into a workable plan

A user journey hypothesis to validate through observation.

Which stop first?

Order the stops to avoid unnecessary detours.

Will it fit the day?

Balance opening hours, visit times and the return time.

Within budget?

Add up costs and clarify what the estimate includes.

←

Add or remove a stop → rebuild the plan and check it again.

SmartTripAI aims to reduce the effort of scheduling and checking constraints.

Plan the trip from departure to return

Illustrative journey: Hanoi → Da Nang → Hanoi · 2 travelers · 3 days / 2 nights.

A 3-day trip does not mean 3 full days of sightseeing.

Where does the trip start?

Hanoi → Da Nang → Hanoi

How much time is left?

Allow for return travel and airport transfers

What does the budget cover?

Return travel, local transport, stays, meals and visits

AI components and the problems they solve

Proposed design: AI interprets and recommends; algorithms schedule and validate.

AI Travel Agent

Interpret requests, ask for missing details and call tools.

Reduce the effort of expressing and organizing trip requirements.

Recommendation

Rank places by interests, available time and budget.

Help travelers choose relevant places from many options.

Optimization Engine

Select stops, assign days and order visits under constraints.

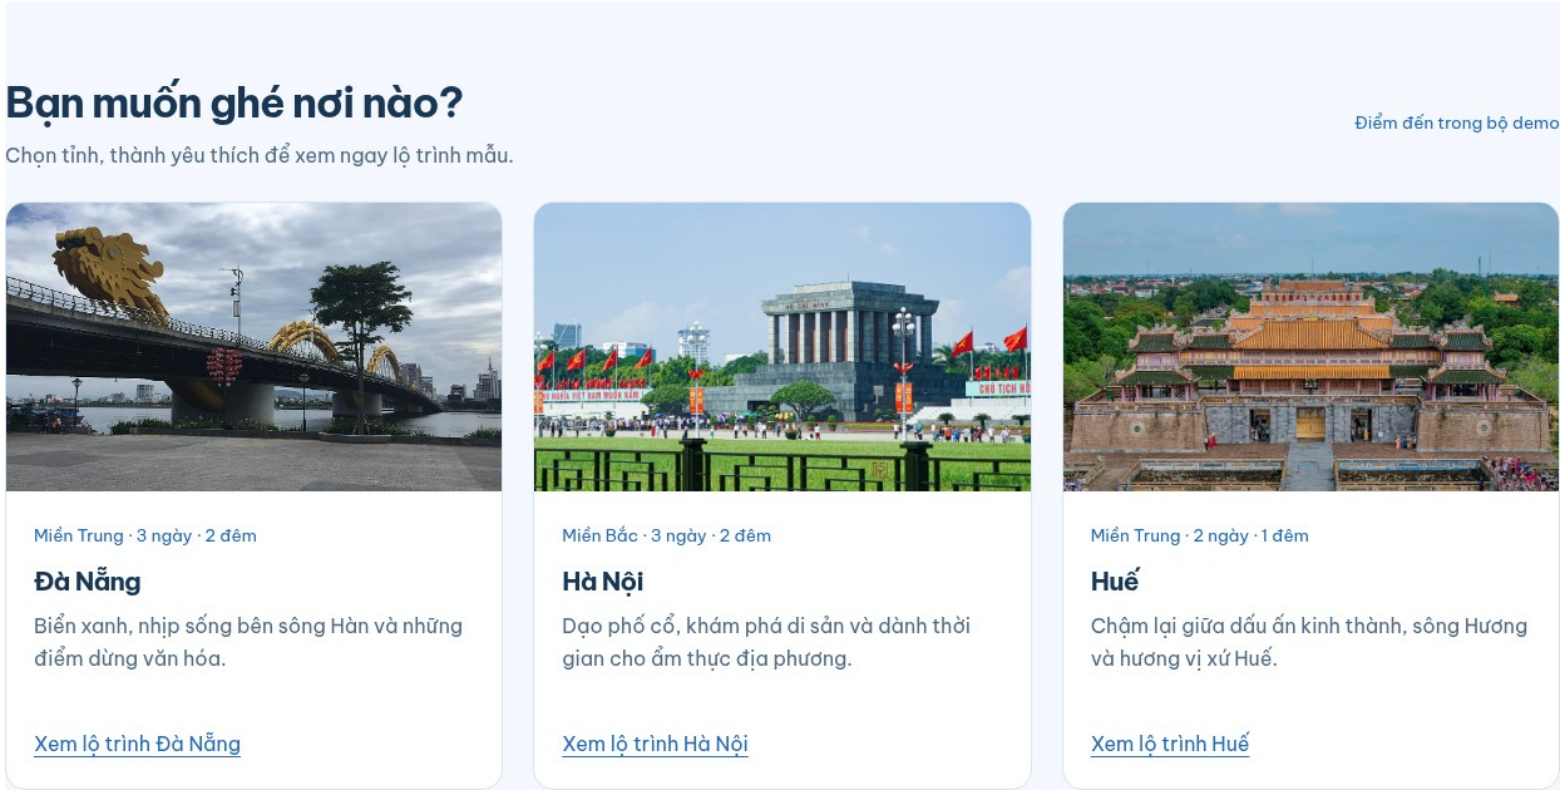

Build feasible schedules and limit detours and conflicts.

An independent validator checks time, cost and required stops before saving.

The LLM must not invent prices or opening hours. The current FE uses mocks, not a real AI/solver.

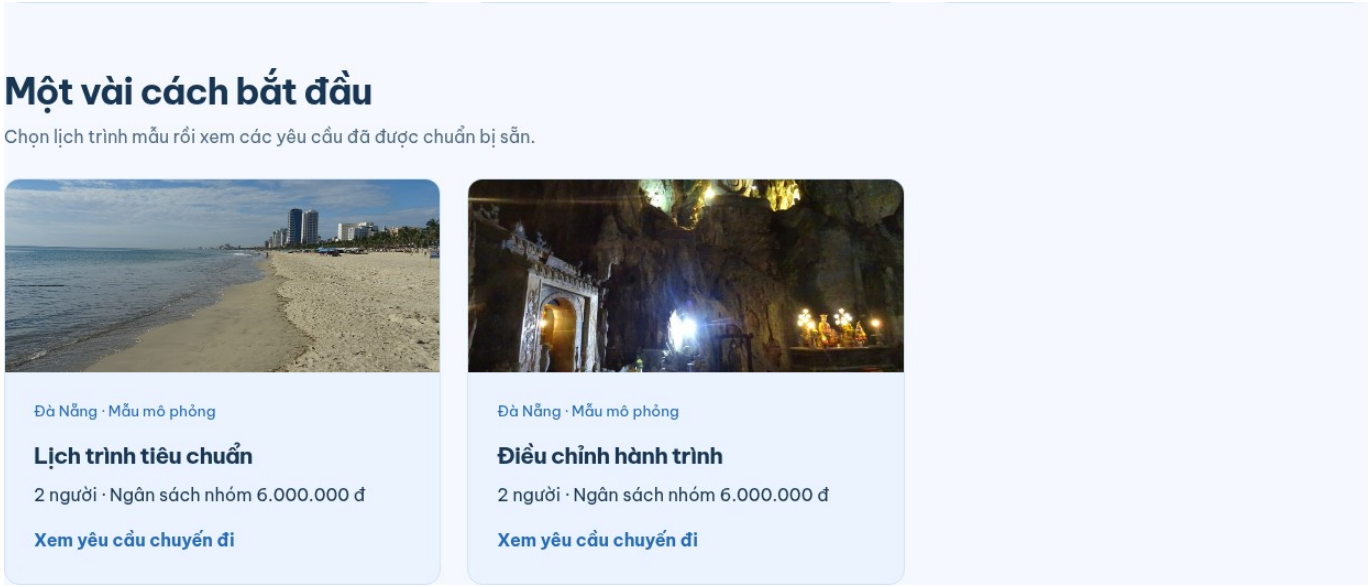

Choose a destination. Open an itinerary.

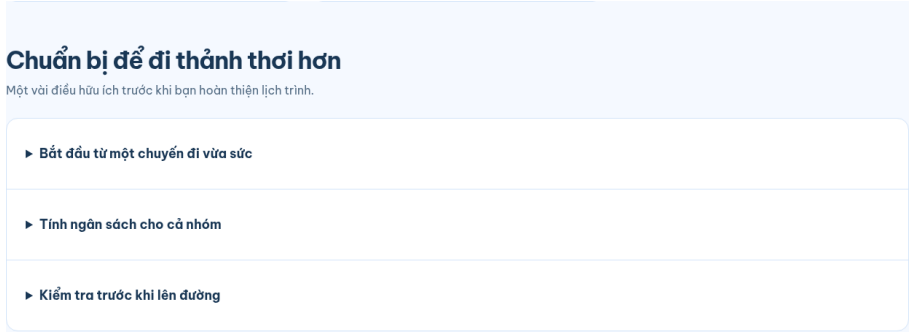

Da Nang has a detailed mock plan; Hanoi and Hue have illustrative sample itineraries.

Start with a template. Prepare with a guide.

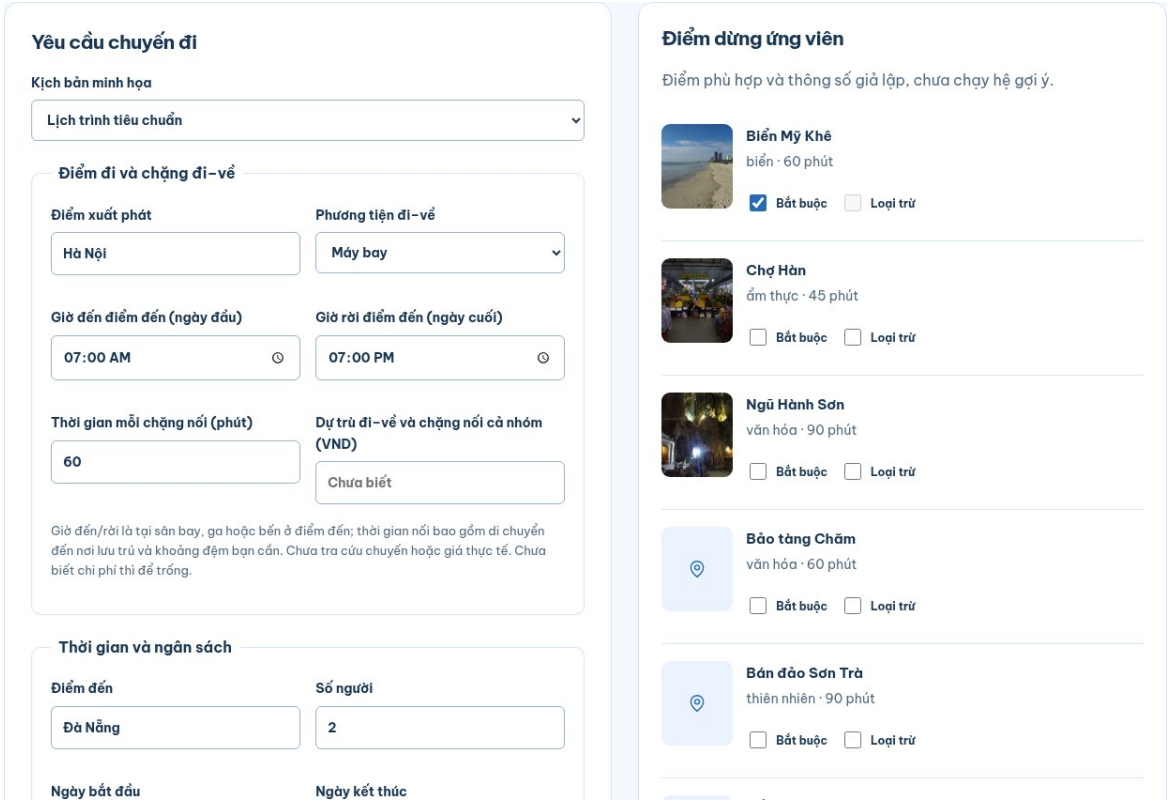

Templates offer a quick start; guides explain budgeting and pre-trip checks.

Plan around your time and priorities

Enter origin, transport mode, arrival/departure times, transfers and group travel costs.

Track the full journey and group budget

Example: VND 2,145,000 at the destination (mock) + VND 3,000,000 for travel (user input).

SmartTripAI — From travel ideas to a clear plan

Discover destinations, organize your journey and understand what needs checking.

Easy to get started

Explore destinations, itinerary templates and travel guides.

See the full journey

Origin, destination, arrival, departure and transfer time.

Know what costs cover

Separate mock estimates from user-entered travel costs.
